DevOps Engineer (AWS & Docker)

Join a team building dependable software and better digital experiences.

Department	Location	Employment	Level
Infrastructure	Remote	Full-time	Mid-Senior

Position overview

Design and operate secure, reliable cloud infrastructure and delivery pipelines. You will help engineering teams deploy confidently, improve observability, automate repetitive work, and strengthen operational resilience.

Ideal candidate

An automation-minded infrastructure engineer who balances speed with reliability and security. The ideal candidate is calm under pressure, documents decisions, and partners well with application developers.

Key responsibilities

- Build and maintain AWS infrastructure using infrastructure as code.
- Create and improve CI/CD pipelines for application delivery.
- Manage Docker-based workloads and Kubernetes environments.
- Implement monitoring, alerting, logging, and incident-response practices.
- Improve system security, backup, disaster recovery, and access controls.
- Partner with development teams on performance and deployment architecture.
- Reduce operational toil through scripting and automation.

Required qualifications

- 4+ years in DevOps, SRE, cloud engineering, or infrastructure roles.
- Strong hands-on experience with AWS services and IAM.
- Production experience with Docker and container orchestration.
- Experience with Terraform or another infrastructure-as-code platform.
- Strong Linux administration and networking fundamentals.
- Experience building CI/CD pipelines using Jenkins, GitHub Actions, GitLab CI, or similar.
- Knowledge of monitoring and logging platforms such as CloudWatch, Grafana, or Prometheus.
- Experience participating in incident response and post-incident reviews.

Desirable qualifications

- AWS certification.

- Experience with Kubernetes at scale.
- Knowledge of secrets management and cloud security frameworks.
- Experience with cost optimization and capacity planning.
- Scripting skills in Bash, Python, or Node.js.

What success looks like

- Delivers high-quality work predictably and communicates risks early.
- Improves team practices, documentation, and technical quality over time.
- Builds trusted partnerships across product, engineering, and quality teams.
- Contributes to a respectful, inclusive, and learning-oriented culture.

What we offer

- Remote-first environment with meaningful infrastructure ownership.
- Training and cloud-certification support.
- On-call practices designed around sustainability and shared responsibility.
- Paid time off and company holidays.

Hiring process

Introductory discussion, infrastructure deep dive, practical architecture exercise, and final team interview.

Equal opportunity statement

We value diverse backgrounds and perspectives. Employment decisions are based on business needs, role requirements, and individual qualifications without regard to legally protected characteristics.

How to apply

Submit your resume and a brief note highlighting the experience most relevant to this position. Please include your preferred work location and availability.
