QA Automation Engineer (Selenium & Cypress)

Join a team building dependable software and better digital experiences.

Department	Location	Employment	Level
Quality Assurance	Hybrid	Full-time	Mid-Level

Position overview
Improve product quality through thoughtful test strategy and reliable automation. You will design automated UI and API tests, collaborate early in the development cycle, and help teams release with greater confidence.

Ideal candidate

A curious, detail-oriented quality engineer who can think like a user, a developer, and a risk analyst. The ideal candidate builds maintainable automation rather than brittle scripts and communicates defects with clarity.

Key responsibilities

- Design, implement, and maintain automated UI tests using Selenium and Cypress.
- Create API and integration tests for web services.
- Develop test plans, risk-based test coverage, and regression suites.
- Work with developers and product owners to clarify acceptance criteria.
- Integrate automated tests into CI/CD pipelines.
- Analyze failures, document defects, and support root-cause investigation.
- Track quality metrics and recommend process improvements.

Required qualifications

- 3+ years of software quality assurance experience.
- 2+ years building automated tests with Selenium, Cypress, or similar tools.
- Strong JavaScript skills and familiarity with modern test frameworks.
- Experience testing REST APIs using tools or code-based frameworks.
- Working knowledge of SQL for test-data validation.
- Experience with Git and CI tools such as Jenkins or GitHub Actions.
- Understanding of testing techniques, defect lifecycle, and Agile development.
- Strong written communication and attention to detail.

Desirable qualifications

- Experience with Playwright.
- Knowledge of performance, accessibility, or security testing.
- Experience testing enterprise grids, forms, and data-heavy applications.
- Familiarity with Docker-based test environments.
- ISTQB or related testing certification.

What success looks like

- Delivers high-quality work predictably and communicates risks early.
- Improves team practices, documentation, and technical quality over time.
- Builds trusted partnerships across product, engineering, and quality teams.
- Contributes to a respectful, inclusive, and learning-oriented culture.

What we offer

- Hybrid schedule and close collaboration with engineering teams.
- Opportunity to shape automation strategy and quality standards.
- Professional-development budget and certification support.
- Paid time off and company holidays.

Hiring process

Recruiter conversation, QA methodology interview, practical automation exercise, and final team discussion.

Equal opportunity statement

We value diverse backgrounds and perspectives. Employment decisions are based on business needs, role requirements, and individual qualifications without regard to legally protected characteristics.

How to apply

Submit your resume and a brief note highlighting the experience most relevant to this position. Please include your preferred work location and availability.
