Senior PHP/Laravel Developer

Join a team building dependable software and better digital experiences.

Department	Location	Employment	Level
Engineering	Remote	Full-time	Senior

Position overview
Lead the design and delivery of secure, maintainable web applications and APIs using modern PHP and Laravel practices. You will work closely with product, frontend, QA, and DevOps teammates to turn business requirements into dependable software.

Ideal candidate

A pragmatic senior engineer who combines deep Laravel knowledge with strong software-design judgment. The ideal candidate communicates clearly, mentors others, writes testable code, and is comfortable owning features from discovery through deployment.

Key responsibilities

- Design, build, and maintain scalable Laravel applications and REST APIs.
- Translate product requirements into technical plans, estimates, and incremental releases.
- Review code, improve engineering standards, and mentor mid-level and junior developers.
- Optimize MySQL queries, background jobs, caching, and application performance.
- Implement automated tests and participate in CI/CD and release processes.
- Collaborate with frontend, QA, product, and infrastructure teams.
- Troubleshoot production issues and contribute to root-cause analysis.

Required qualifications

- 5+ years of professional PHP development experience.
- 3+ years building production applications with Laravel.
- Strong knowledge of PHP 8+, object-oriented design, SOLID principles, and common design patterns.
- Hands-on experience with MySQL, schema design, indexes, and query optimization.
- Experience designing and consuming REST APIs.
- Working knowledge of Git, Docker, Linux, and CI/CD workflows.
- Experience with PHPUnit or Pest and a strong commitment to automated testing.
- Professional written and verbal communication skills.

Desirable qualifications

- Experience with queues, Redis, event-driven architecture, or microservices.

- Exposure to AWS or another major cloud platform.
- Experience with observability tools, application monitoring, and structured logging.
- Knowledge of API security, OAuth 2.0, JWT, and OWASP practices.
- Experience working in Agile product teams.

What success looks like

- Delivers high-quality work predictably and communicates risks early.
- Improves team practices, documentation, and technical quality over time.
- Builds trusted partnerships across product, engineering, and quality teams.
- Contributes to a respectful, inclusive, and learning-oriented culture.

What we offer

- Remote-first collaboration with flexible working hours.
- High-impact technical ownership and mentoring opportunities.
- Professional-development budget and access to technical training.
- Paid time off and company holidays.

Hiring process

Introductory conversation, technical interview, practical code review or take-home exercise, and final team discussion.

Equal opportunity statement

We value diverse backgrounds and perspectives. Employment decisions are based on business needs, role requirements, and individual qualifications without regard to legally protected characteristics.

How to apply

Submit your resume and a brief note highlighting the experience most relevant to this position. Please include your preferred work location and availability.
