Senior System Administrator

Roberto D.

Aumenta
Software Development

18+ years of experience designing, securing, and optimizing hybrid environments (AWS and on-premise) across industrial, financial, and multi-site operations. Proven impact in strengthening cyber resilience and reducing infrastructure vulnerabilities by up to 76%. Expertise in network and security architecture, IAM, disaster recovery, and risk mitigation. Strategic partner to business units, enabling secure digital transformation and high availability of critical services. Strong track record leading cross-functional initiatives, managing vendors and budgets, and delivering scalable, secure infrastructure solutions in complex environments.

EDUCATION

- **Instituto Tecnológico de San Luis Potosí -** Bachelor's Degree in Computer Systems Engineering
- Diploma in Cybersecurity Management –UVM (2023)
- Diploma in Nego a on & Conflict Management – UVM

SKILLS

Cloud & Infrastructure:

- AWS (EC2, Backup, Security)
- Windows Server
- Active Directory
- DNS
- DHCP
- Office 365

Networking & Security:

- Fortinet
- VPN
- Network Segmentation
- Zero Trust
- Endpoint Security

Virtualization & Continuity:

- VMware
- Hyper-V
- Veeam
- BCP/DRP
- High Availability

Governance & Security:

- CIS Controls
- Risk Matrix
- IAM
- Security Policies

LANGUAGES

- English Professional
- Spanish Native

PROFESSIONAL EXPERIENCE

CORPORATIVO VALORAN

Jul 2018 – Jan 2026

IT Infrastructure & Cybersecurity Specialist

Responsibilities

- Led the design, administration, and evolution of hybrid IT infrastructure (AWS and on-premise) supporting multiple critical business units across industrial and corporate environments.
- Designed and standardized network and security architecture across 10+ locations, implementing For net-based solutions that strengthened perimeter security and reduced exposure to cyber threats.
- Implemented cybersecurity policies, endpoint protection, and access control frameworks aligned with risk management practices, significantly reducing vulnerabilities across critical infrastructure assets.
- Acted as a strategic partner to business and operational teams (including industrial sites), ensuring secure implementation of technology initiatives and continuity of operations.
- Managed Office 365 and Active Directory environments, ensuring secure, efficient, and controlled access for over 500 users, achieving 100% adoption.
- Developed and executed disaster recovery and backup strategies, achieving RTOs of 30–60 minutes and ensuring business continuity.
- Led technical initiatives with internal teams and external vendors, ensuring successful delivery of infrastructure and security-related projects.
- Managed IT budget and vendor relationships, optimizing operational costs and service contracts.
- Documented and standardized operational procedures, improving incident response efficiency and knowledge management.

Key Achievements

- Reduced infrastructure vulnerability risk by 76% across cri call assets.
- Achieved 95% availability in mission-cri call services supporting business operations.
- Reduced AWS operational costs by 24% without impacting performance.
- Improved disaster recovery capabilities, minimizing risk of data loss and ensuring rapid recovery mess.
- Achieved ~20% cost reduction in network infrastructure through vendor negotiation and standardization.

ADMINISTRACIÓN Y SERVICIOS COMPUTACIONALES S.A. DE C.V.

2007 – 2018

Infrastructure & Support Engineer

Responsibilities

- Implemented enterprise network infrastructure and perimeter security solutions for multiple clients.
- Designed and deployed IT infrastructure and network solutions tailored to business needs.
- Administered and virtualized servers, improving resource u liza on and system performance.
- Delivered Level 1, 2, and 3 technical support in enterprise environments.
- Diagnosed and resolved infrastructure, storage, and connectivity issues both onsite and remotely.

Key Achievements

- Implemented network infrastructure for 20+ clients, reducing connectivity incidents.
- Improved support response mess by 40% through process optimization.
- Consolidated servers through virtualization, reducing physical hardware requirements.

CERTIFICATIONS

- Fortinet NSE 4.
- Certified Scrum Master (CSM).
- VMware vSphere – Install, Configure and Manage.
- Microso Certified: Windows Server.
- Managing Office 365 Identities and Services.

CORE COMPETENCIES

- Cybersecurity Strategy & Risk Management.
- IT/OT Security Environments.
- Security Architecture & Network Design.
- Cloud Security (AWS).
- Iden ty & Access Management (IAM).
- Business Continuity & Disaster Recovery (BCP/DRP).
- Vulnerability Reduction & Security Controls (CIS).
- Security Policies & Governance.
- Infrastructure Standardization & Opmization.
- Vendor & Budget Management.
